NOTICE OF PUBLIC MEETING – County of Santa Cruz
MENTAL HEALTH ADVISORY BOARD
OCTOBER 19, 2023 ♦ 3:00 PM-5:00 PM
HEALTH SERVICES AGENCY
1430 FREEDOM BLVD, SUITE A, ATRIUM, WATSONVILLE, CA 95076
THE PUBLIC MAY JOIN THE MEETING BY CALLING (831) 454-2222, CONFERENCE ID 446 941 593#

Xaloc Cabanes
Chair
1st District

Valerie Webb
Member
2nd District

Michael Neidig
Co-Chair
3rd District

Antonio Rivas
Member
4th District

Jennifer Wells Kaupp
Member
5th District

Laura Chatham
Member
1st District

Dean Shoji Kashino
Member
2nd District

Hugh McCormick
Member

Secretary
5th District

Felipe Hernandez
Board of Supervisor Member

Tiffany Cantrell-Warren
Director, County Behavioral Health

Karen Kern
Deputy Director, County Behavioral Health

Stella Peuse – Youth Representative

IMPORTANT INFORMATION REGARDING PARTICIPATION IN THE
MENTAL HEALTH ADVISORY BOARD MEETING

The public may attend the meeting at the Health Services Agency, 1430 Freedom Blvd, Suite A, Atrium, Watsonville. Individuals interested in joining virtually may Click here to join the meeting or may participate by telephone by calling (831) 454-2222, Conference ID 446 941 593#. All participants are muted upon entry to prevent echoing and minimize any unintended disruption of background sounds. This meeting will be recorded and posted on the Mental Health Advisory Board website.

If you are a person with a special need, or if interpreting services (English/Spanish or sign language) are needed, please call 454-4611 (Hearing Impaired TDD/TTY: 711) at least 72 hours in advance of the meeting in order to make arrangements. Persons with disabilities may request a copy of the agenda in an alternative format.

Si usted es una persona con una discapacidad o necesita servicios de interpretación (inglés/español o Lenguaje de señas), por favor llame al (831) 454-4611 (Personas con Discapacidad Auditiva TDD/TTY: 711) con 72 horas de anticipación a la junta para hacer arreglos. Personas con discapacidades pueden pedir una copia de la agenda en una forma alternativa.

**NOVEMBER 16, 2023 • 3:00 PM – 5:00 PM**

**HEALTH SERVICES AGENCY**

**1400 EMELINE, BLDG K, ROOMS 206-207**

**SANTA CRUZ, CA 95060**
MENTAL HEALTH ADVISORY BOARD
SEPTEMBER 21, 2023 ♦ 3:00 PM - 5:00 PM
1400 EMELINE AVENUE, ROOMS 206-207, SANTA CRUZ
Microsoft Teams (831) 454-2222, Conference 637 403 975#

Present: Celeste Gutierrez, Dean Kashino, Hugh McCormick, Jeffrey Arlt, Laura Chatham, Valerie Webb, Xaloc Cabanes, Stella Peuse, Supervisor Felipe Hernandez
Excused: Antonio Rivas, Jennifer Wells Kaupp, Michael Neidig
Staff: Tiffany Cantrell-Warren, James Russell, Jane Batoon-Kurovski

I. Roll Call – Quorum present. Meeting called to order at 3:04 p.m. by Chair Xaloc Cabanes.

II. Public Comments
• Beverly Grove – provides Chaplain Services to the Santa Cruz County Jail and Juvenile Hall. She stated she is coordinating presentations for the new Inspector General that has responsibility for oversight of the Sheriff’s Office and the jail. Beverly stated that they would like as many community organizations as possible to meet the Inspector General. She is currently setting up meetings via zoom or in person.
• Richard Gallo – stated he attended the August 22nd rally and provided feedback that he was disappointed in how they allowed the bill to go as is instead of making recommendations to modify it or amend it. Richard also stated that folks need to educate themselves about the housing bond as it is tied with the Modernization Act and said the peer workforce movement was not included in CalAIM. Richard also stated he is not happy with the last innovation plan as it was not a community driven process and it is an oversight commission plan that should have not stepped in interfering with the CPP process.
• QZ – provided written correspondence to the Board and stated he would like to know what happens next.
• BJ Nadeau – stated that Bill McCabe, CEO of Family Services Agency described how the CANS model is heavily evidenced based which targets, identifies and treats the patient identified suicidal drivers. BJ also announced that for the first time in Santa Cruz County, there will be an American Foundation for suicide community walk, supporting those who have lost loved ones. It will be held in Scotts Valley at Sky Park on Saturday, September 30th. Sarah Galvez Tyson, who is chair of the program, lost her 24-year-old son to suicide.

III. Board Member Announcements
• The Chair announced that California Behavioral Health Boards and Commissions is offering effective board member training. Board members can also access the recording on the website if they can’t attend the live training.
• The Chair provided clarification of ad hoc committees – they are 6 months or less.
• The Chair reminded the board that when members of the board represent themselves as members of the MHAB in a public setting, the position taken shall represent the decision made and voted upon by the MHAB. Statements made should be clear on what the board’s stance is versus an individual board member’s stance. In summary, if board members are going to represent themselves as part of the board, they must be in line with what the board is saying, whether it is done in person or in writing.
IV. Business / Action Items
   A. Approve August 17, 2023 Minutes as amended to include that George Carvalho will provide the information to Coral Brune’s questions.
   Motion/Second: Valerie Webb / Dean Kashino
   Ayes: Celeste Gutierrez, Dean Kashino, Hugh McCormick, Jeffrey Arlt, Laura Chatham, Valerie Webb, Xaloc Cabanes, Supervisor Hernandez
   Nays: None
   Absent: Antonio Rivas, Jennifer Wells Kaupp, Michael Neidig
   Motion passed.

V. Presentation: Centering Wellness: The Role of Schools in Addressing Behavioral Health
   Santa Cruz County Office of Education Team:
   - Farris Sabbah, County Superintendent of Schools
   - Lauren Fein, Behavioral Health Director
   - Hayley Newman, School Climate & Wellness Coordinator
   - Dr. Michael Paynter, Student Support Services Director
   ▪ There are 4 divisions at the COE: Student Programs, Tech & Innovation, Business Services, Educational Service. The COE is state funded under the CA Dept of Education (not under the Board of Supervisors).
   ▪ Gaps are: Decentralized Service Delivery, Limited/Inequitable Access, Organizational Silos, Staff Burnout/Limited pool of clinicians, Complex and Inconsistent funding sources, Stigma.
   ▪ Ongoing Efforts:
     1. Staff Training - already trained 77 staff since March 2023 and trained a new cohort of Youth Mental Health First Aid instructors. The goal is to have 500 adults across the county trained in Youth Mental Health First Aid. In addition, partnered with Encompass who is offering trauma informed and resiliency training for school staff members.
     2. Case Management
     3. Training for Students - Teen Mental Health First Aid training for students in grades 10 through 12. One of the initiatives is to identify peer support programs like Hope Squad as well as honoring youth led mental health advocacy groups across the county.
     4. NAMI Training for Parents
     5. Wellness Centers at all Comprehensive High Schools
        ▪ The Companion Project - it is grant funded which is a collaboration between county Behavioral Health and the County Office of Education and serves students K through 12 within Santa Cruz Public Schools who have become disengaged from school, perhaps due to emotional well-being, behavioral health or substance use disorders. There are target groups that are focused on, but not limited to LGBTQ youth, youth as students in transition and those on the verge of truancy, suspension or expulsion and presenting with a high acuity behavioral health need. There were 200 referrals in the first year.
        ▪ Wellness Centers - can be accessed by students for various reasons: 1) in crisis, 2) emotional de-escalation, 3) need to be connected with an adult right away, 4) appointment with community partner who is using the office in the Wellness Center or with school site staff, 5) self-referral, 6) referring a friend, 7) brain break, a space for student to come use a coping skill or sensory tool to deescalate themselves to be ready to learn and go back to class, 8) health education for mental health, education and information.
        ▪ The goal is to have two school-based pilot wellness centers open by Spring 23-24 School Year. The long-term goal is to have a Wellness Center at every district high school and middle school County-wide.
        ▪ The Wellness Coordinator is typically a classified staff member who is trained in how to screen students the level of need the student needs at that time. They are also supporting students by giving them information that is in the Wellness Center. Other folks that are in a Wellness Center are wellness interns, counseling, social work, MFT interns, community-based partners, and wellness peer advocates.
        ▪ Moving forward, Billing and Sustainability
          1. The State will be announcing a new fee schedule called the Multi Payer School-Linked Fee Schedule which would allow schools to draw down both commercial and medical insurance for schools. Services include psychoeducation, screening & assessment, therapy, peer support and care coordination.
2. The COE is looking at other possibilities for the workforce of mental health counselors and clinicians, with a few initiatives coming down from the State: Wellness Coaches, Peer to Peer, and Community Health Workers.
3. The COE is also looking at working with the alliance and seeing how the COE can become an enhanced care management provider so that medical beneficiaries are able to provide that next level of service.

VI. Address Board Members and Public concerns regarding RI International
Georgea Madeira, Senior Principal Consultant, and lead consultant on the MHSOAC Project
Jamie Sellar, Chief Strategy Officer

- RI International is currently in nine US states as well as Australia, providing mostly about 75% of facility-based crisis services. The rest is either warm lines, some mobile team support, do traditional/non-traditional outpatient programs, residential, a few other inpatient programs, mental health urgent care centers. RI has about 1500 employees, about 700 of whom are going to identify as having lived experience and see about 30,000 people in their programs. RI is one of the largest trainers of folks toward peer certification in the world. RI trained over 17,000 people to become eligible for their state certification to be a peer employment.

- In the course of 30 years, there are four negative reviews in the Better Business Bureau: two happen to be about the training programs (one about somebody who hadn’t been through and one who had some difficulty getting his credentials); a mother of a guest who was not able to come in and take his stuff without him giving permission; and an employee who wanted RI to sign off that they were eligible for their basic supervised employment toward their licensure, which RI was willing to do.

- In 2019 SAMHSA, the federal government approached RI and said they would like RI to write, to be the lead agency providing the national guidelines for behavioral health crisis care. RI agreed with the understanding that there is a heavy focus on the crisis system which has to have strong call centers, impeccable mobile teams that work where people live, work and play and facility-based crisis that is an alternative to jails and emergency departments.

- In 2020, SAMHSA published their national guidelines for Behavioral Health Crisis Care. The core of what they do is trying to strengthen communities and a sustainable model that is going ahead and be able to integrate crisis care so that nobody has to get care in the back of a police car, in a jail, in an ambulance or wait for potential lifesaving care.

- Reasons for counties leaving - when this plan was first offered, a lot of counties in the beginning took the opportunity to receive a no cost assessment. Various reasons for leaving included: Lost key personnel during the initial phase of this project and the county didn’t have any resources to continue; one county had two main people resign at the same time; another county didn’t have enough inn funds to complete this project.

VII. Reports
A. Secretary’s Report
- No attendance issues.
- Training – reminder that Hugh, Celeste, and Jennifer need to renew their Ethics training.
- Available training – CA Behavioral Health Boards and Commissions training on October 20th and on October 21st on how to be an effective board member.
- Reminder to board members that any training that is watched or attended that has to do with MHAB responsibilities will be given credit (don’t need a certificate of completion).

B. Board of Supervisors Report - Supervisor Felipe Hernandez
Supervisor Hernandez provided an update on the MHSA reform and the housing bond, and said the State is going to try to combine both on the ballot measure. As Supervisor
Hernandez previously mentioned, 1/3 of it is going to support housing programs, about $6 million annually will be diverted from mental health programs into housing. This ballot measure is going to be on for March 2024.

C. Behavioral Health Report - Tiffany Cantrell-Warren, Director of County Behavioral Health

- The CAO’s response to the Grand Jury Report was received by the Board of Supervisors at the September 12th meeting with some additional direction. The additional direction was to direct staff to conduct a salary survey for the Mental Health Client Specialist and Senior Mental Health Client Specialist classifications and other positions with a high vacancy rate within the Behavioral Health division, and then return to the BOS with an update from the Health Services Agency Recruitment and Retention Committee by the end of 2023. Tiffany stated there will be ongoing action to address the workforce challenges in Behavioral Health.

- In the MHAB’s response to the Grand Jury Report, the MHAB recommended they be included in the oversight committee of the interim facility while the new facility for youth is being built at 5300 Soquel Avenue. Tiffany stated there is no oversight committee for the development of that facility and suggested providing the MHAB with an update every month. The current update is Behavioral Health is working with Watsonville Community Hospital (WCH) to be the diversion point for youth who are on a 5585 hold. The idea is that youth who are on a 5585 hold would be admitted to the WCH Emergency Department (ED), the ED staff would attend to their medical screening and then there would be a behavioral health team that’s embedded in the ED that provides the behavioral health assessment, intervention, and safety planning. The proposal is that the behavioral health team is going to be a contractor, which they are working to identify that contractor right now. That service would be provided for 12 hours a day, seven days a week, 8am to 8pm and that behavioral health team would consist of 1 licensed clinician and 1 unlicensed staff person during those 12 hours daily. The staff would engage with the patient and then also provide services and disposition recommendations. If the hold needs to be rescinded, the County MERTY team can respond to rescind the hold. If the patient is determined to require inpatient placement, then it would be the behavioral health team and that contractor who is taking the lead to have that discharge plan to identify another psychiatric youth facility that they can be admitted to.

D. Ad Hoc Committees

The board did not have time to discuss the Ad Hoc Committees. Discussion to be held next month.

E. Patients’ Rights Report – George Carvalho, Patients’ Rights Advocate

A report was provided; however, George could not attend the meeting due to a prior commitment.

VIII. New Agenda Items – none.

IX. Future Agenda Items – none.

X. Adjournment

Meeting adjourned at 5:03 p.m.
Watsonville Trauma Response MDT

MHSA Under Threat

The Mental Health Services Act (MHSA) – also known as Proposition 63 – was passed with great fanfare and statewide excitement by California voters in 2004. The bill – overwhelmingly supported by residents throughout the Golden State – imposed a then-significant 1% tax on California’s growing millionaire population (those with personal income over $1 million) to fund the provision of behavioral health services. At least 95% of MHSA revenues – the vast majority of funds – is handed over to counties (and their respected mental health systems) directly - to fund the delivery of a wide array of specialized services for individuals living with or at risk of developing a mental illness. Almost immediately, the highly-anticipated MHSA began to pay dividends for county mental health plans – who began to receive (highly influential, largely unexpected, and regular) monetary support to support (and arguably improve) the landscape of behavioral health services within their municipalities. Roughly one-third of (all) the county mental health infrastructure throughout the state of California is fueled and/or directly supported by the MHSA – which contributes over $3.8 billion annually.

Most who have worked directly within the behavioral health space/field in the (almost) two-decades since California voters overwhelmingly greenlighted Proposition 63 (the MHSA), herald the bill as a “system-shifting-success.” But at the same time, 19 years later, others (including a large lot of Capitol Hill) are vociferously calling the MHSA “antiquated, ineffective, and behind the times.” The fight is real. And so are the implications. Existing law authorizes the State Legislature to add (any needed) provisions to clarify and modify procedures of the Mental Health Services Act by a majority vote. Governor Gavin Newsom understands this - and is actively using his
extensive political capital to mount a cold and calculated charge at the MHSA, local behavioral health programs, and the discretion and flexibility that California’s county mental health plans have had to effectively deliver them.

In many respects, Newsom wants to completely reshape and reinvent the wheel of the MHSA – significantly altering the way that California spends its “millionaire’s tax.” The Governor’s controversial new legislative proposal - which he says will effectively “modernize California’s behavioral health system” - will be presented to voters on March 5, 2024. If passed by a majority vote, Newsom’s bill (SB 326 Eggman) would immediately recast and officially rename the Mental Health Services Act (MHSA) – shaking the foundation of its almost-two-decade legacy - as the “Behavioral Health Services Act (BHSA).”

The Mental Health Services Act established (rather) broad categories for how California counties can spend their annual windfalls (cash infusions) – and most importantly the percentage of funds which must be spent on certain areas and activities. Three components of the MHSA focus on direct clinical services (Community Services and Supports, Prevention and Early Intervention, and Innovative Programs) and three components focus on Infrastructure (Capital Facilities, Information technology, and Workforce Education). If it passes in the statewide March 2024 primary election, Governor Gavin Newsom’s Behavioral Health Services Act would drastically change the funding categories of the MHSA – requiring county mental health plans to allocate (much) more funding towards housing interventions (a huge theme), Full Service Partnerships (FSPs) and treatment of substance use disorders (SUDS) - all while reducing individual municipalities’ overall discretion. Rather notably, the BHSA would eliminate the long-standing and influential “Innovative Program” category in favor of the administration of programs providing a broad array of housing interventions. Some behavioral health insiders/experts forecast an imminent clash between established mental health programs and other (BHSA advents) who offer homeless services (a buzz word)– each “side” is reliant on the same (limited) MHSA/BHSA funding to sustain their operations.

Those on the current (MHSA) side of things contest that the state has already gone “all in” on homelessness – having spent more than $20 billion on housing and homelessness since 2018. Newsom and those in the BHSA camp, who plan on diverting nearly one third of the state’s Mental Health Services Act money to help address homelessness contend that homelessness is one of the most high-profile challenges plaguing California – increasing 32% in the past four years. At the end of the day, there’s a distinct possibility that, after heated battles and fisticuffs, the re-vamped MHSA (BHSA) could very well result in county mental health plans (throughout the state of California) having to spend less, cut back on, or even entirely eliminate some of their current (and provenly effective) programs - and other long-functioning mental health offerings/services established within their communities. We’ll examine “why” in this report - and examine the implications that SB 326 Eggman could have here in Santa Cruz County- for our extremely important and impactful local County Mental Health Plan and its associated community based and partner organizations.

An Examination of SB 326 (Eggman) – “The Behavioral Health Services Act” - Gavin Newsome’s Proposal to “Modernize California’s Behavioral Health System.”

Modernizing California’s mental health system sounds like a rather romantic notion on the surface – heck, the original Mental Health Services Act legislation (2004) hasn’t had a severe poke (or largescale shake up) in almost 2 decades. But, before we all get aboard Gavin Newsom’s bullet train policy and deem the upcoming MHSA revamp 100% necessary, we need to closely examine the specifics and get into the nitty gritty of the bill: what are the potential gains of the far-reaching piece of legislation, and what could be the potential losses (or changes) for individual county mental health systems.

In a dramatic move, SB 326 (Eggman) would radically alter the distribution of funding – completely doing away with some key, and arguably foundational, funding vehicles and modalities prominently featured in the current MHSA funding paradigm/program. One of the first major things that the new (newly named) Behavioral Health Services Act would do is open up direct funding sources to serve those with (all manner and states of) substance
use disorders (SUD). A small, but impactful percentage (5%) of BHSA funding will go directly to population-based mental health and SUD programs. But, a much larger piece of the proverbial pie will almost undoubtedly be necessary to serve this new, pressing, and at-risk population (often living with co-occurring disorders). Over $1 billion (30% annually) of total BHSA dollars would be dedicated to housing interventions – and 50% of that amount would be used to serve those who are chronically homeless (with a focus on encampments). 35% of BHSA dollars would be specifically earmarked for what are known as Full Service Partnerships (FSPs) - Newsom’s immediately impactful Behavioral Health Services Act would devote 30% of the “millionaire’s tax” to “behavioral health services and supports” – including workforce education and training, capital facilities and technological needs, innovative behavioral health pilots and programs, services under the adult, child, and older adult systems of care, and early intervention programs (at least 50% of total spending in the category).

As noted previously, SB 326 (Eggman) and the Behavioral Health Services Act would completely do away with any and all county “innovation programs” – a mainstay and staple in the (current) MHSA days. Instead, Newsom’s legislation requires the establishment of a county-administered program to provide housing interventions for persons who are chronically homeless, or who are experiencing or at risk of homelessness. Gavin Newsome has high hopes that voters will validate his proposal (SB 326 Eggman) in conjunction with a complimentary $4.68 billion bond measure to significantly replenish California’s psychiatric treatment beds. The bond measure – the Behavioral Health Infrastructure (Bond) Act – must pass in order for the amendments to the Mental Health Services Act (SB 326 Eggman) to pass concurrently in the March 5, 2024 statewide primary election. Just an FYI: AB 531 (Irwin) the Behavioral Health Infrastructure Bond Act of 2023 authorizes $4.68 in general obligation bonds to finance grants for the acquisition and construction and rehabilitation of unlocked, voluntary, and community-based treatment settings and residential care settings. Of the $4.68 billion, up to $865 will be used to construct and rehabilitate housing for veterans and other experiencing, or at risk of homelessness (and are living with a mental health challenge). At least that’s the ultimate proposed goal.

The Allocation and Funding Categories of MHSA Revenues Under Current Californian Law

When Californian voters approved the groundbreaking Mental Health Services Act in 2004 – which exacted a 1 percent tax on (all) residents earning more than $1 million dollars to fund the provision of the state’s mental health services – broad categories were established to dictate how counties could spend the influx of cash (and the fixed percentage of funds that needed be spent on specific kinds of activities). At least 95% - the vast majority – of MHSA funds were initially allocated to support a wide (and in some cases revolutionary) array of services for men and women living with or at risk of a mental illness. Here are the existing MHSA funding categories and their respective (set in stone) allocations:

(Total of $2.1 Billion Annually)

Prevention and Early Intervention: $369 Million - 19%
Outreach to Older Adults (Seniors) – Suicide Prevention – School-based Services

Innovation Programs: $91 Million - 5%
Technology Integration – Holistic Care

Community Services and Supports: $1.626 Billion - 76%
Outpatient Treatment – Crisis Intervention – Full-Service Partnerships – Wellness Centers – Capital Facilities – Housing Services – Workforce and Training

You’ll immediately notice that the vast majority (76%) of current (county) Mental Health Services Act funding must be allocated and directly spent on providing various “Community Services and Supports” (CSS). This wide, expansive – and quite foundational - spending category actively supports a wide range of direct service provisions delivered by county mental health plans (including outpatient treatments). Current state regulations require counties to use a full 50% of all Community Services and Supports funds to establish and fuel Full-Service Partnerships (FSP’s). FSP’s (an emerging and contested buzz word and soon-to-be central issue for both sides of
the status quo vs. BHSA debate) provide much-needed mental health and wrap-around services – like employment and housing support, case management, and clinical care – for individuals deemed to have “the greatest mental health needs.” In addition to direct funding for Community Services and Supports, counties can devote 5% of their MHSA haul to “Innovation Programs” – with which they can tinker around, experiment, and try brand new and novel approaches to preventing and treating mental illness in their communities. As noted above, counties must devote 19% of their total MHSA funding to Prevention and Early Intervention (PEI) activities – specifically aimed at preventing mental illnesses before they become crippling and/or severe.

In the subsequent sections, better picture will emerge of exactly how Governor Newsom’s new legislation (SB 326 Eggman) could change and disrupt the current (and arguably effective) MHSA paradigm and existing behavioral health services – requiring counties to allocate significantly more MHSA/BHSA funding towards providing housing interventions and funding local Full Service Partnerships. All while potentially reducing overall county (mental health plan) spending discretion and available funds to support a number of their currently financed (and effective) programs. For example, the newly (eventually) passed Behavioral Health Services Act would completely eliminate (delete all of the provisions relating to) the highly-praised Innovative Program category – instead requiring county mental health plans to establish and directly administer a program providing housing interventions.

The Big Shift: Imminent Changes in the Funding Categories and County Allocation of MHSA Funds Under Gavin Newsom’s Controversial Proposal (SB 326 Eggman) – Known as the “The Behavioral Health Services Act”

If given the greenlight by California voters at the March 5, 2024 primary election SB 326 (Eggman) – also widely known as the governor’s Behavioral Health Modernization proposal– would unilaterally and almost instantaneously influence and effect the way counties (statewide) allocate funds to support local services devoted to individuals living with or at risk of developing a mental illness within their communities. Some laud Newsom’s proposed legislation – an expansion to include treatment of substance use disorders - as “progress and modernization,” and others contend that SB 326 is a step (back) in the completely wrong direction. The (newly established) BHSA would still allocate 92% of total funds directly to California counties (and their respective mental health plans) - but the focus of funding allocations would shift towards providing additional funds for housing interventions and the support of Full-Service Partnerships (including Substance Use Disorder and Assertive Community Treatments).

In conjunction with the Behavioral Health Infrastructure (bond) Act. – which must concurrently pass in the March primary in order for the Governor’s proposed sweeping amendments to the MHSA to take effect – SB 326 (Eggman) zeroes in on the housing crisis that is (and has been) actively plaguing communities across the state. Some critics contend that the diversion of (strict and categorized) behavioral health dollars to combat housing insecurity and outright homelessness isn’t the (current) right, equitable and prudent strategy. But, under the Governor’s proposal a full 30% of MHSA/BHSA county funding would be used for housing or infrastructure funding to formulate new housing and the provision of housing itself. Housing and the unhoused are huge themes throughout the burgeoning piece of legislation. One of the key areas of foci for SB 326 and its companion $4.68 Billion Bond Act that need to be “OK’d” by California voters in March 2024. The Governor’s proposal would require that 50% of MHSA/BHSA funds in the important “Housing Intervention category” (30% of total funds) be directed for the provision of housing interventions for individuals experiencing chronic homelessness. And all of the housing services provided by Full-Service Partnership participants/organizations (another buzz word) would also be counted under this influential category.

With “housing” and housing interventions the obvious victors (and foci) in Governor Gavin Newsom’s sweeping dismantlement of the Mental Health Services Act – in favor of his own Behavioral Health Services Act and accompanying Bond measure – some county mental health plans (and key players within the California behavioral health space) have vocalized their concern regarding a possible reduction in the flexibility in the dispersion of
MHSA funds within their (long-established) communities. Some studies have shown that based on current expenditures, individual counties would be forced/required to increase spending on Full-Service Partnerships by around $121 million and spending on “housing” by $493 million in the coming years (if SB 326 Eggman is pushed forward in March 2024). Let’s take a quick look at – and brief breakdown of – the key allocation of MHSA funds and specific categories existing within SB 326 (Eggman) – California Governor Gavin Newsom’s Behavioral Health Services Act:

**Housing Interventions:** 30%
Family Housing for Children and Youth – Rental and Operating Subsidies – 50% for Chronically Homeless Individuals

**Behavioral Health Services and Supports:** 30%
Adult, Older Adult, and Youth Services. – Capital Facilities – Deposits to Prudent Reserves – Early Interventions (Majority Must be Spent on Early Interventions)

**Population-Based Mental Health and Substance Use Disorder Prevention:** 5%
Suicide and/or Overdose Prevention – Population-wide Reduction in Mental Health Disorders (Cannot Include the Provision of Services to Individuals)

**Full-Service Partnerships:** 35%
Substance-Use Disorder Treatment – Assertive Community Treatment – Employment Services

The first thing that you’ll notice when comparing and contrasting the funding/spending categories inherent to the existing Mental Health Services Act and the Governor’s proposed Behavioral Health Services Act is the complete elimination/dismantlement of “Community Services and Supports (CSS).” This powerful and foundational MHSA funding avenue/stream – encompassing everything from outpatient treatment and crisis intervention to wellness centers and housing services – has long-fueled a monumental 76% of total behavioral health programming in counties (mental health plans) throughout the State of California. Gavin Newsom’s legislation and sweeping transformation will undoubtedly cut into the funding discretion that counties have long enjoyed – to innovate, target local populations, and exact positive systemic change. The funding category that gives county mental health plans the most freedom and overall flexibility – Behavioral Health Services and Supports (BHSS) – is miniscule compared to existing policy (Community Services and Supports). Under Newsome’s proposal, only 30% of total MHSA county funding would go towards supports and services for adults, older adults, and children, early intervention programs (majority), workforce education/training, capital facilities and technological needs, and innovative behavioral health projects.

Trying to figure out exactly how the exact percentages work out and line-up when comparing the highly disparate MHSA and BHSA funding structures – “this money goes to this category and this money goes to this category … and these categories combine and create this spending category” – can be a rather confusing undertaking. In many areas and respects, the BHSA and MHSA don’t totally jive or completely line up. But the total (potential) change exacted by Newsome’s system-shaping proposal is massive. Under the Governor’s proposal, 30% of total MHSA funds allocated California counties must be used on housing intervention programs/undertakings for the provision of housing – or any kind of infrastructure funding to create brand new housing. And 50% of all (these) funds dedicated to this (brand new and controversial) funding category must be used to create/facilitate housing interventions for those who are chronically homeless. Newsom’s proposal would decree that all counties spend a substantial 35% of total funding on “Full-Service Partnerships” – including a brand-new focus on substance use disorders and assertive community treatment.
Exact Dollar Amount (a total of $2.1 Billion in MHSA funds) That Will be Allocated to Each (New) Category Under Governor Gavin Newsome’s Proposed SB 326:

$730 Million: Devoted to Full-Service Partnerships (Services for those enrolled in a partnership – including housing interventions)
$626 Million: Devoted to Housing Interventions and Supports (50% on services for the chronically homeless)
$626 Million: Devoted to Behavioral Health Services and Supports (wellness centers, crisis intervention, stigma and discrimination reduction, outpatient treatment, school-based services, outreach, older adult and youth-centric services, capital financing, technology improvements, workforce development and education)

When you begin to (carefully) compare and contrast current expenditures to those dictated by Newsom’s SB 326 proposal you’ll find that counties across the state of California will have to significantly increase spending in two key areas: housing (the chief focus and foundation of the new proposed legislation) and Full Service Partnerships (FSP’s). To achieve funding targets, housing interventions are estimated to draw around $493 million from county coffers. And Full-Service Partnerships an additional $121 million.

To fund these dramatic expansions and developments under the advent of SB 326, counties would need to scramble to reduce or redirect their expenditures on programs/offering that fall under the Behavioral Health Services and Supports funding category limit. This turns out to be a pretty big deal – effecting the way that counties support their current (and largely effective) behavioral health programs and partners and expand their community-based offerings in the future. Currently, under the Mental Health Services Act, expenditures that would be eligible under the (new or possibly forthcoming) BHSS category make up around 60% of total MHSA dollars/expenditures. Newsom’s SB 326 caps the (at least now) broad category at 30% - meaning expenditures would have to be slashed dramatically – from close to $1.3 billion to $621 million.

At the end of the day, after all careful analysis, it seems as if the proposed revamped MHSA (known as the BHSA in the future) would dramatically shift the focus of funding to early intervention programs, Full-Service Partnerships, and (most importantly) housing. The change would undoubtedly affect – and perhaps eliminate - the currently available programming provided by counties, partner organizations, and community-based organizations under the currently functioning MHSA – including prevention and outreach services, crisis response, and outpatient services.

When the Mental Health Services Act levied a 1% tax on personal income above $1 million to mend California’s fractured behavioral health system, the funds represented nearly a third of all dollars spent in the field. Currently, the majority of money goes directly to counties to use as they see fit. There’s much-appreciated flexibility and adaptability endemic to the present system. The proposed (funding) categories introduced by Newsom and his administrative constituents could hatchet away at the flexibility long afforded to individual counties- to deliver precise and tailormade behavioral health services within their communities. By establishing the “Behavioral Health Services and Supports” (BHSS) as a sort of “super category” – with only 30% of total spending allocated towards all of it – Governor Newsom would effectively eliminate a huge chunk of the MHSA funding that could/can accommodate flexible program expenditures. Brand new BHSS policies (under SB 326) would decree that counties spend precious funds on things like early interventions that would cut into funding available for other (proven or innovative) county initiatives.

The fact that the majority of Behavioral Health Services and Supports (BHSS) funds must be spent on “early intervention programs” will surely loom large going into the future – putting a stranglehold and establishing a choke point on currently existing expenditures – including outpatient treatment services, prevention services, outreach, and crisis response. All programs existing within the current (MHSA) “Community Services and Supports” structure – representing 76% of $1.626 billion in annual MHSA expenditures – will be totally split up and separated; classified under new Housing Interventions, BHSS, and FSP categories. Where specific (currently operating MHSA behavioral health) programs will fall within the new BHSS framework is still being
discussed/debated - but it’s assumed that all Prevention and Early Intervention (PEI) programs would fall under the BHSS category, and innovation programs under Housing Interventions and BHSS. But the exact percentages and monetary allocations are still being worked out - and largely up in the air at this point. Many who’ve combed through the legislation and crunched the numbers believe that there’s a sizable chance that some/many PEI and CSS programs that fit within the newly established BHSS category could experience sizable reductions in MHSA funding.

For many California counties, the MHSA was (and has always been) a total godsend. Almost overnight, it gifted (county) mental health plans a hugely appreciated degree of flexibility and discretion in how they could deliver over $2.1 billion annually to fund, fix, and dramatically improve their arsenal of locally offered behavioral health services. For years, counties have operated with relative freedom and confidence – operating a superfluity of Innovation, Community Supports and Services (CSS), and Prevention and Early Intervention (PEI) mental health programs to meet local needs with relative impunity. The flexibility, freedom, and autonomy offered and guaranteed by the MHSA – and its almost two decades of transformative policy – will most likely be a thing of the past (a happy and cherished memory) if Governor Gavin Newsom’s sweeping SB 326 proposal actually passes in the March 2024 primary - and manifests as the system-changing, system-shaking (or system breaking?) legislation that many say that it could be.

The Behavioral Health Infrastructure Bond Act: The Companion (Or the Crux?) of SB 326?

In addition to dutifully pushing SB 326 through the legislative process, California Governor Gavin Newsom is backing – and urging the State’s voters to approve – a massive $6.38 bond measure on the March 2024 primary ballot. The Bond – known collectively as the Behavioral Health Infrastructure Bond Act – would fund an impressive 10,000 new mental health treatment beds. Here’s the key: The bond measure must pass in order for the amendments to the Mental Health Services Act (SB 326 Eggman) to (also) pass concurrently in the March 5, 2024 primary election. AB 531 (Irwin) the Behavioral Health Infrastructure Bond Act of 2023 authorizes $4.68 in general obligation bonds to finance grants for the acquisition and construction and rehabilitation of unlocked, voluntary, and community-based treatment settings and residential care settings. Of the $6.38 billion, up to $865 will be used to construct and rehabilitate housing for veterans and other experiencing, or at risk of homelessness (and are living with a mental health challenge). At least that’s the ultimate proposed goal. The debate surrounding the AB 531 Bond Act has gotten hot recently, and some mental health advocates harbor concerns that the housing mandate and SB 326 could result in a sizable ($700 million +) loss to existing county mental health plans and their existing services.

Pushing Back: Opponents of SB 326 and AB 531 ($4.68 Billion Bond Act) Make Their Voices Heard

Not everyone is (or was) happy with Gavin Newsom’s proposed largescale dismantling of the almost-two-decades-old Mental Health Services Act. Many service providers, mental health advocates, and analysts have voiced serious gripes about SB 326 (and its sister AB 531 Bond Act). When California’s Governor announced his plans to battle the state’s escalating homeless crisis using MHSA dollars during his January 2024 State of the State tour, scores of groups rose in active opposition - voicing concerns that the new and sweeping housing mandates could jeopardize (some, or many) existing behavioral health programs. Many established mental health providers (and peer groups) rose together to collectively battle against the Governor and his Sacramento constituents (fellow legislators) – criticizing them for neither providing a complete justification for their proposed far-reaching changes (in SB 326), nor extensively analyzing how these changes may negatively impact currently delivered/offered services in their communities. Recently, it seems like the Governor is starting to be willing to listen – and in some cases willing to completely acquiesce – to growing, collective, organized, and unified pressure.

Responding to His Constituents – Gavin Newsome’s Recent Amendments to SB 326

Governor Gavin Newsom’s dramatic unveiling of SB 326 - his sweeping and transformational set of reforms to the existing Mental Health Services Act – probably didn’t go as smoothly as he planned. Newsome desperately tried to
spin a universally positive narrative - that the vast majority of California county mental health plans (and their respective partners and community-based organizations) were 100% behind his legislation. Well, no. Even though Newsome proudly highlighted a flashy collection of glowing accolades and atta-boys from influential leaders in the State’s behavioral health and substance use disorder spheres of influence, serious -and swelling - opposition to his system-shifting policies quickly emerged. As voices in protest (and outrage in many cases) grew louder – and more impassioned- statewide, Newsom and his colleague and SB 326 compatriot Senator Eggman bowed to mounting pressure – and responded with a series of important and far-reaching amendments to the (their) bill.

Prior to the recently-announced amendments to SB 326, many of the State’s (children’s) mental health advocates were up in arms – argued that the Governor was effectively pitting the California’s children and homeless residents against each other – forcing them to compete for the same services (and basic funding streams). The (current) MHSA has long-focused on the areas of prevention and children’s services – areas where the State of California has long-underinvested. Those involved in adolescent (and TAY) mental health contended that Newsom’s original (pre-amended) BHSA legislation would siphon funds away from (currently offered) prevention and early intervention services for youth, and actually/ultimately worsen California’s mental health crisis. Current MHSA policy requires a portion of its funds to be spent on children and youth – 51% of early intervention and prevention dollars are required to be spent on those 0-25 years old. Newsom’s original proposed changes to the MHSA effectively eliminated any and all requirements that money be spent on children and transition age youth – and opened up the possibility for counties to spend zero dollars on children’s mental health. If the original proposed changes (and bill text) to the MHSA were enacted in their entirety, the State’s children and TAY population could have experienced a reduction in annual behavioral health services and supports of over $700 million.

If enacted in its original form, SB 326’s complete lack of funding for and focus on children’s/youth/adolescent behavioral health (services) could have had a dramatic, immediate and possibly catastrophic effect for county mental health plans (and the State’s mentally ill youth.) As frustrations and tensions mounted, and conversations between the Governor’s office and up-in-arms (children’s) mental health advocates became increasingly heated Newsom and Eggman caved – approving a series of amendments to their prized legislation. Most importantly, the amendments include a mandate that 51% of money set aside for prevention programs to directly toward youth and children under the age of 26. The newly amended language in SB 326 Eggman is/was the result of weeks of stakeholder meetings, input, and impassioned back-and-forth – and is already garnering an overwhelmingly positive response among children’s groups, counties, and families throughout California. “We really, really want to thank the administration for being so willing to work with us on these amendments,” says Lishaun Francis, director at youth-advocacy group Children Now. “We were really excited to see a number of things - primarily the set for kids in the prevention and early intervention bucket.”

SB 326 Criticisms Continue to Persist Throughout California

If approved by voters in the March 2024 primary election, SB 326 together with companion and sister AB 531 (Behavioral Health Infrastructure Bond Act) could result in sweeping, once-in-a generation policy changes. Some critics call SB 326 and AB 531 “rushed” – a far cry from the original 2004 Mental Health Services Act (MHSA) legislation that was born from public hearings and multi-year discourse from stakeholders and probably most importantly, mental health consumers, throughout the state of California. Gavin Newsome’s complete 233-page overhaul of the MHSA is criticized as being overly complicated – rushed - and drafted behind closed doors without the same degree of stakeholder, consumer, and broad community feedback.

It’s not uncommon to hear the word “rushed” – or even “rash” – when discussing the Behavioral Health Services Act (SB 326) and its constant companion legislation AB 531. Critics argue that putting both system-shifting pieces on the March 2024 legislature is unnecessarily swift for such a massive reform, and that this go around, consumers
and educated stakeholders will have less than 6 months to totally discuss, digest, and provide necessary feedback on the ballot measure. Critics argue that the stakeholder process and direct consumer involvement so intrinsic—and vital—to the original 2004 MHSA legislation has not been evident in the current legislation.

Input from consumers—those partaking in behavioral health and substance use disorder treatments/services—and directly impacted populations were key to the development of original MHSA policy. But SB 326 may allow counties (mental health plans) to implement changes to their MHSA/BHSA plans without the currently required stakeholder process. Consumers living with a (serious or mild) mental illness offer unique and often vital perspectives regarding systemic issues and injustices that abound. Senate Bill 326 will increase membership on the Mental Health Services Act Oversight and Accountability Commission from 16 to 20 people but cap the number of voting consumers at 2.

**Current State of Legislation: SB 326 and AB 531 – What’s Next?**

Gavin Newsom’s groundbreaking and quite controversial legislative package meant to modernize and transform California’s behavioral health system passed a significant hurdle in late August 2023. After a close examination and a not-so-dramatic debate, the State Assembly Health Committee voted—in an overwhelmingly decisive 11-0 manner—to pass SB 326 (authored by Senator Susan Eggman). The vote by the Assembly Health Committee may have seemed assumed, blasé, or uneventful to some closely following the journey of Newsom/Eggman’s proposed modifications to the MHSA (part of the Governor’s two-bill legislative package), but it did mark the very first vote on SB 326 by any (important) governmental party.

Gavin Newsom’s two bill package—SB 326 and companion $6.38 billion bond measure AB 531—moved onto the next phase (California Legislature) … inching one step closer to a sure-to-controversial placement on the ballot at the 2024 March primary election. Both bills have been designed to work concurrently (and must be passed together)—with the ultimate goal of completely transforming the design of and monetary allocations devoted to California’s mental health and substance use disorder services system in the years to come. Bond measure AB 531—which would allocate $4.68 billion to establish new supportive housing and community-based treatment settings—continued its tortuous journey through the State legislature in the Senate Appropriations Committee. And SB 326—already dissected in this report—ventured on to the Assembly Housing and Community Development Committee.

Just last week—on September 14, 2023—California’s/Newsom’s sweeping mental health transformation initiatives overwhelmingly passed the California Legislature—giving the State’s voters an opportunity to enact the Governor’s proposed sure-to-be impactful health and homelessness measures in March of 2024. The California Legislature approved the two-companion bills—cornerstone pieces of Newsom’s multi-year homelessness and behavioral health agenda—to reform and modernize current MHSA policies and provide funding to build new behavioral health beds and housing for the State’s residents (and at-risk populations). The bills—Assembly Bill 531 and Senate Bill 326 (Eggman)—will dedicate billions of dollars to new behavioral health housing, provide funding key to California’s behavioral infrastructure and workforce, and create new accountability and transparency policies.

The highly anticipated final votes came after months of back-and-forth with stakeholders across the state—including veteran organizations, mental health consumer groups and families with “lived experience,” school administrators, businesses/organizations, first responders, and local (county) behavioral health plans. Newsom’s planned policies were tweaked and amended multiple times to bring more groups/parties on board—supporting his sure-to-be system shaking/shifting bills.

The (proposed) $6.38 general obligation bond to build 10,000 new treatment beds and supporting housing units—Assembly Bill 531 (Irwin)—represents the single largest expansion in California’s mental health treatment and residential settings in the State’s history. If passed by voters in the March 2024 primary election, SB 531 would create brand new (dedicated) housing for homeless individuals living with behavioral health challenges—with a portion of funds directed towards serving America’s veteran population (a $1 billion allocation for housing).
What’s next regarding sister-bills SB 326 (Eggman) and AB 531 (Irwin)? Governor Newsom has until October 14th, 2023 to take action on the legislation. Once signed by Newsom – which is pretty such a done deal at this point – his sweeping modernization of the MHSA and the state’s behavioral health services systems and accompanying (huge) bond measure will head to the ballot – for final approval by Californian voters. Both bills are tightly linked and dependent upon each other and will appear jointly and quite prominently – as a single measure - on the March 2024 ballot as “Proposition 1.”

Upon the penultimate go-ahead of SB 326 (Eggman) and AB 531 (Irwin) by the State’s Legislature, bill-author and Senate Health Committee Chair Susan Eggman sounded relieved and seemed to (finally be) at peace. More than a solid year of constant (and intense) policy-drafting, bill amendments, and heated constituent and stakeholder engagement finally paid dividends:

“I am so grateful for the support of my Senate and Assembly colleagues in approving SB 326 and AB 531 and for the leadership and effort Governor Newsom has demonstrated on reforming our behavioral health care system. Together these bills provide a critically needed overhaul to the landmark Mental Health Services Act and infuse desperately needed resources into our behavioral health care continuum. The Governor made a commitment to get this done this year and today the Governor and the Legislature delivered on that commitment. We have a behavioral health crisis playing out on our streets. With this package, Californians now will have the chance to voice their support for a new direction with a vote for safer communities and a more coherent, functional and humane approach to community-based behavioral health care.” – Eggman

The Curious (And Slightly Controversial) Enigma That is CA State Senator, Susan Eggman

Currently regarded (and lauded) as one of the most knowledgeable and impactful California legislators on behavioral health issues, Susan Eggman will (finally) be termed out of the State Senate this year after nearly 12 years of service. Zeroing in on the possible (eventual) end to her long and slightly unorthodox career as a politician, Eggman has been a whirlwind of activity the past few years. Most notably (recently) passionately pushing for her (and Governor Newsome’s) complete overhaul of the landmark Mental Health Services Act (MHSA) – the so called “millionaire’s tax” passed by voters as Proposition 63 in 2004 – through SB 326.

Is the recently focused-upon and newsworthy Eggman making up for lost time, and ending her political tenure with a carefully calculated flourish of activity? It’s definitely worth considering (and examining) her most recent- and highly noteworthy – undertakings in the behavioral health realm (SB 326 included).

An influential (especially recently) Democratic State Senator hailing from Stockton, CA, Susan Talamantes Eggman is on a mission to get things done. Maybe it’s the fact that her waning days in the State legislature – 12 years, first in the Assembly, and now in the Senate – are about to end, that has added fuel to her fire: recently introducing a series of influential (and controversial) legislative pieces/bills that could dramatically shift and transform the landscape of California’s behavioral system - for decades to come (after the eventual end of her political career).

Eggman, 62, has stated that when her days - working side by side with the Governor and other State legislators- as an active politician finally end that she will return to teaching Social Work at California State University, Sacramento - and dabble in mental health advocacy. Born in the Castro Valley, where her family owned an apiary (bee keeping business) Susan Eggman’s interest in behavioral health issues coalesced while working at a local psychiatric facility during her senior year of high school. Among other things, Eggman is known to be a “community activist,” and the first Latina and the first Lesbian to be elected to the Stockton City Council (2006). She was teaching at Sacramento State in 2012 when she secured a seat on the California State Assembly – where she served for 8 years – and then was easily elected to the Senate in 2020. Senate Bill 326 – the Behavioral Health and
Modernization Act – is one of Eggman’s most highlighted and arguably impactful measures to date ... but in the recent years, the Democratic State Senator has been introducing and fiercely backing other instrumental pieces of behavioral health legislation as well.

Her (and Newsome’s) modifications to the MHSA and “millionaire’s tax” of 2004 faced major hurdles in the waning days of legislative session, and vocal opposition (and outright condemnation) from stakeholders (mostly consumer groups) and counties concerned about funding allocations and losing vital (long-established) services. And the Behavioral Health Bond Act – co-authored by Eggman – central to Governor Newsome’s efforts to reform California’s behavioral health system and combat the State’s homelessness epidemic will be combined as a single measure - “Proposition 1” - on the March 2024 primary ballot. Her most-recent sister-measures passed just in time: California’s State Legislature adjourned on September 14th and the bills were pushed through September 14th.

During the past few years, Senator Eggman has introduced a series of bills to attack and attempt to significantly modify the restrictions enacted by the 50-years-old Lanterman-Petris Short Act (LPS). Some have zigged and zagged through the State Legislature and been signed by the Governor. This year, Eggman successfully attempted to expand the rather-restrictive LPS definition of “grave disability” – which she and many behavioral health advocates have long said prevents meaningful and impactful interventions and treatments. Senate Bill 43 – one of Eggman’s most-recent and proudest accomplishments – expands the “grave disability” standard to include substance abuse... which in many cases accompanies and often times exacerbates types of severe mental illness. And results in an inability to care or provide for oneself. SB 43 is a foundational part of Eggman’s overall mission to fix or alter the behavioral health system in California and has emerged as a key piece in her portfolio of legislative initiatives – achieving gradual but growing bipartisan support. While Governor Gavin Newsome hasn’t announced his official position on SB 43, the initiative is expected to pass and be signed by the politician. The specifics of SB 43 were hotly contested in the Capital, and debates over the timeline for implementation of the new standards continued well into the chaotic final weeks of the legislative session. Ultimately, in a flurry of last-minute amendments, counties (and respective mental health plans) were allowed to adopt the expanded LPS standards “optionally” in 2004 but must adopt them by Jan. 1, 2026.

Three years ago, Susan Eggman championed a then-major/influential bill aimed at strengthening the almost-two-decades-old “Laura’s Law” – also known as Assisted Outpatient Treatment (AOT). While working in a behavioral health clinic in 2001 - 19-year-old Nevada college student Laura Wilcox was shot and killed by a symptomatic mentally ill patient whose family’s pleas to treat and intervene were completely ignored by the site’s officials. The eventual policy/bill known collectively as “Laura’s Law” emerged as one of the few legal avenues for family members attempting to help or treat mentally ill relatives. Today, most states – including California – have Assisted Outpatient Treatment programs that provide treatment to severely mentally ill persons (generally voluntarily). And most are overseen by civil, rather than criminal courts to intervene before someone ends up in prison or jail as a direct result of an untreated mental illness. When the original “Laura’s Law” was passed by California legislature in 2002, counties throughout the State could “opt out” – with no public hearings. Eggman’s 2020 behavioral health legislation required all counties who “opt out” to conduct hearings – which generated a vortex of contentious local public debate/hearings/arguments that led to a widespread adopting of Assisted Outpatient Treatments throughout California.

Partly resting on the foundation of Laura’s Law, the “CARE Act” (Community Assistance, Recovery, and Empowerment Act) is Eggman’s most-recent behavioral health initiative to permeate the State of California. Passed just last year, with the strong and steady backing of Governor Gavin Newsom, the CARE Act established statewide – unlike Laura’s Law – with severe (financial) sanctions for counties that fail(ed) to create programs. As a centerpiece to Newsom’s (and Eggman’s) administrative focus on mental health reform (and increased funding), the CARE Act rolled out in eight California counties, and will be featured statewide in 2024. The CARE Act requires that all counties create a brand-new system of civil courts to oversee intervention, housing, and treatment for the
State’s residents “cycling through hospital emergency rooms. In jails or prisons ill-equipped to assist them, or on the streets.” The soon-to-be-decreed CARE Act hasn’t been met without a fair share of negativity and backlash from localities throughout the State – many of whom argue that local funding of CARE Court – intrinsic to the CARE Act – could directly impact local Mental Health Services Act (MHSAs) dollars: estimated at $120 million dollars for eight (currently operating) counties and $290 million for the rest of Californian counties (during the next year).

A Quick Note on the Possible Impact on (County Mental Health Plan) Medi-Cal Certified Peer Support Specialists

Passed to wide fanfare and enthusiasm in 2021, the Medi-Cal Peer Support Specialist Certification Program Act established evidenced-based, recovery-focused Peer Support Specialist Services in county mental health plans across the State of California. Many parties closely analyzing SB 326 (Eggman) agree/project that Peer Support Specialist services – across the continuum of care – could be drastically reduced by the passage of the bill. Currently, Medi-Cal certified Peer Support Specialists strictly operate within the Medi-Cal Specialty Mental Health Services and Drug Medi-Cal service (area) administered by individual County Behavioral Health Agencies (plans). Almost 100% of Medi-Cal certified Peer Support Specialists can perform zero work outside of County managed behavioral health programs. Advocacy group “Cal Voices” anticipates that in the first year alone, SB 326 (Eggman) will cut the current level of MHSAs funding for Community Supports and Services (CSS) – the main funding source for Peer Support Specialist Services – in half. Today, most Medi-Cal Peer Support Specialists are employed within crisis mobilization teams, outreach and engagement, and outpatient services. By shifting funds away from currently effective behavioral health services and treatments towards housing and other interventions, there may be a significantly reduced need/demand for Medi-Cal Peer Support Specialist services in the behavioral health outpatient system/realm of care. This may influence the hiring and growth of Peer Support Specialists across California – just as formal certification and full employ is finally being implemented statewide.

Direct Impact on Santa Cruz County (County Mental Health Plan and Partner Organizations)

SB 326 – Gavin Newsom’s much heralded bill to ‘revolutionize’ the State’s behavioral health (and substance use and homeless services) system will do away with the current – and rather broad- “Community Services and Supports” funding category – redirecting and/or eliminating $1.626 Billion (76% of total MHSAs funds) of funding to County mental health plans. Most of the funding will be re-categorized, but some will most-undoubtedly get lost in the shuffle. According to Santa Cruz County’s “MHSAs Community Services and Supports Information Sheet” (directly published by the Santa Cruz County behavioral health department) here is what CSS entails, and may be on the proverbial chopping block:

**Community Services and Supports: $1.626 Billion - 76%**
- Outpatient Treatment – Crisis Intervention – Full-Service Partnerships – Wellness Centers – Capital Facilities – Housing Services – Workforce and Training

**What is the purpose of the Community Services and Supports (CSS) Component?**
To provide services and supports for children and youth who have been diagnosed with or may have serious emotional disorders, and adults and older adults who have been diagnosed with or may have serious and persistent mental issues.

**What are the allowable expenditures for the Community Services and Supports (CSS) Component?:**
This component allows funds to be used for mental health services, personnel, operating expenditures and program management. Services must address all age groups. Programs funded by the MHSA must be voluntary in nature. The majority of funds under CSS must be used for Full-Service Partnerships.
What are the service categories under CSS?
There are three types of services:

**Full-Service Partnerships (FSP):** The foundation of Full-Service Partnerships is doing ‘whatever it takes’ to help individuals on their path to recovery and wellness. There is a low staff to client ratio, a 24/7 crisis availability, and a team approach that is a partnership between mental health staff and clients. FSP’s assist with housing, employment, and education, in addition to providing mental health services.

**General System Development:** Funds to help improve programs and services to address mental illness or emotional disturbance, including reducing ethnic disparities, mental health treatment, rehabilitation services including supportive housing and supportive employment, and personal service coordination and case management.

**Outreach and Engagement:** This funding is established to reach underserved populations, including outreach to persons with brief or crisis-oriented contact, and as an approach to reduce ethnic disparities.

Completely Gone? Santa Cruz County’s “Innovative Programs” MHSA Funding Stream (5% Total MHSA Funds)

Current MHSA legislation awards Californian counties over $91 million annually to fund “Innovative Programs” within their communities. SB 326 (Eggman) does away with the funding category/avenue entirely – eliminating 5% of (current) MHSA funding. According to the widely available Santa Cruz County MHSA Information sheet, here is how MHSA Innovative Programs are defined and classified:

**What is an Innovative Program?**
An innovative program is defined as one that contributes to learning rather than a primary focus on providing a service. Innovative programs are available for a range of approaches including, but not limited to:
- Introduction of a new mental health practice.
- Substantial change of an existing mental health practice, including significant adaptation for a new setting or community.
- New application to the mental health system of a promising community approach or an approach that has been successful in non-mental health contexts or settings.

As noted in the Santa Cruz County MHSA Information sheet:
Proposed Innovative projects that have previously demonstrated their effectiveness in a mental health setting and that do not add to the learning process or move the mental health system towards a development or new practice/approach may be eligible for funding under other MHSA components. However, an Innovative Project may include a Prevention and Early Intervention (PEI) strategy if it were distinct from the PEI requirements, such as targeted to a group not listed as a “priority population.”

**The Funds for This Component Must be Used for One of the Following Purposes:**
- To increase access to underserved groups.
- To increase the quality of services, including better outcomes
- To promote interagency collaboration
- To increase access to services.
(All innovative projects must be designed for voluntary participation. Innovative projects are largely considered to be pilot or demonstration projects and are subject to time limitations to assess and evaluate their efficacy)

Prevention and Early Intervention Services in Santa Cruz County: Reorganized by SB 326

Senate Bill 326 (Eggman) also does away with the current Prevention and Early Intervention direct MHSA funding stream for Californian counties. Currently, county mental health plans receive $369 million annually (19% MHSA funds) for Prevention and Early Intervention services. Here, according to the “Santa Cruz County MHSA Prevention
What is the purpose of the Prevention and Early Intervention (PEI) component?
The intent is to prevent mental illness from becoming severe and disabling. The PEI plan must include at least one of the following programs: Prevention, Early Intervention, Outreach for Increasing Recognition of Early Signs of Mental Illness, Stigma and Discrimination Reduction, and Access to Linkage to Treatment Programs or Timely Access to Services for Underserved Populations. The PEI component may include one or more Suicide Prevention Programs. If programs are combined, the County must estimate the percentage of funds dedicated to each program.

Definition of Programs:
Prevention: A set of related activities to reduce risk factors for developing a potentially serious mental illness and to build protective factors. Examples of risk factors include adverse childhood experiences, experience of severe trauma, ongoing stress, poverty, family conflict or domestic violence, having a previous mental illness, a previous suicide attempt, or having a family member with a severe mental illness.

Early Intervention: Treatment or other services and interventions, including relapse prevention, to address and promote recovery and related functional outcomes for a mental illness early in its emergence.

Outreach for Increasing Recognition of Early Signs of Mental Illness: A process of engaging, encouraging, educating, and/or training, and learning from potential responders about ways to recognize and respond effectively to early signs of potentially severe and disabling mental illness. Potential responders include, but are not limited to families, employers, primary healthcare providers, law enforcement, and school personnel. Outreach may include reaching out to individuals with signs and symptoms of a mental illness so they can recognize and respond to their own symptoms.

Access to Linkage and Treatment: A set of related activities to connect children, adults, and seniors living with severe mental illness, as early as in the onset of these conditions as practicable to medically necessary care and treatment, including but not limited to care provided by county mental health programs. Examples include screening, assessment, referral, telephone help lines, and mobile response.

Stigma and Discrimination Reduction: Activities to reduce negative feelings, attitudes, beliefs, perceptions, stereotypes, and/or discrimination related to being diagnosed with a mental illness, having a mental illness, or to seeking mental health services, and to increase acceptance, dignity, inclusion, and equity for individuals with mental illness, and members of their families.

As published in the “Santa Cruz County MHSA Prevention and Early Intervention Information Sheet,” the following strategies and core foci are to be used in each of the County’s (currently MHSA-approved, established, and operating) PEI programs:

Access and Linkage: Connecting people with severe mental illness, as early in the onset of these conditions as practicable to medically necessary care and treatment, including but not limited to care provided by county mental health programs.

Timely Access to Mental Health Services for Underserved Populations (Individuals and Families): Increase the extent to which an individual or family from an underserved population who needs mental health services because of risk or presence of mental illness receives appropriate services as early in the onset as possible, through program features such as accessibility, cultural and language appropriateness, transportation, family focus, and cost of services.

Stigma and Discrimination Reduction: Promoting, designing and implementing programs in ways that reduce and circumvent stigma, including self-stigma, and discrimination relating to being diagnosed with a mental illness, having a mental illness or seeking mental health services, and making services accessible, welcome, and positive.
It’s worth noting that one of the current and core MHSA PEI funding components dictates that presently, a full 51% of PEI budgets must be dedicated to individuals 25 years and younger. Community programs that actively serve caregivers, parents, and family members with the goal of addressing MHSA outcomes for youth and children at risk of or with early onset of mental illness can be counted as meeting this requirement.

The (Potential) Impact Senate Bill 326 (Eggman) Could Have on NAMI Santa Cruz County

With its complete elimination of the currently and healthily funded MHSA Prevention and Early Intervention (PEI) category, Senate Bill 326 (Eggman) would restructure or potentially eliminate funding for some existing programs in Santa Cruz County. Currently, NAMI Santa Cruz County has a long-standing project/partnership with the County of Santa Cruz under the (maybe?-soon-to-be-eliminated) MHSA PEI category – an effort falling specifically under PEI’s “stigma and discrimination reduction” efforts. NAMI Santa Cruz County’s official program name is: Stigma and Discrimination Reduction Agency: NAMI-SCC. Under the current MHSA structure, NAMI SCC is doing everything right – proven to conduct a wide range of activities to “reduce negative feelings, attitudes, beliefs, perceptions, and stereotypes and/or discrimination related to being diagnosed with a mental illness, having a mental illness, or to seeking mental health services – and to increase acceptance, dignity, inclusion, and equity for individuals with mental illness and members of their families.” Under the current MHSA PEI category, NAMISCC is checking all of the boxes. Under Newsom and Eggman’s new proposed BHSA modifications however, NAMI’s position and stature within Santa Cruz County’s mental health plan becomes far less clear/certain though.

The Mental Health Services Act established rather broad – at least broad by today’s standards- categories for how counties across the State of California could spend their share of 2004 millionaire’s tax. And the percentage of their annual cash windfalls that could be spent on certain behavioral health areas and projects. Three components – Innovative Programs, Prevention and Early Intervention, and Community Services and Supports – were key pieces of the clinical services funded by the important piece of legislation. If it passes the statewide March 2024 primary election, Governor Gavin Newsom’s Behavioral Health Services Act would drastically change the funding categories of the MHSA – effectively eliminating the currently operating (and effective) Prevention and Early Intervention category – and require California county mental health plans to allocate (much more) millions (even billions) of (current) funding towards housing interventions and associated initiatives. By zeroing in on homelessness and the unhoused – an issue Newsom and his camp have already spent more than $20 billion to manage (since 2018) – there’s a good chance that the Governor may force counties (like Santa Cruz) to spend less, or completely eliminate some of their current (and arguably 100% effective) programs. And sever ties with long-functioning and specialized behavioral health services and programs within their communities.

Right now – and at least for a few years – NAMI Santa Cruz County is sitting pretty and riding high with its current County (PEI – Stigma and Discrimination Reduction) partnership. But in a couple of years, when (or if) the MHSA and the PEI category are completely wiped off the map, where will the organization be (in terms of partnering with the Santa Cruz County mental health plan?). In the first year alone, Gavin Newsom and Susan Eggman’s system shaking legislation – SB 326 – will reduce the current MHSA funding category “Community Supports and Services” by approximately $700 million – shifting currently allocated behavioral health services funds to housing interventions. This could, and probably will, create a huge deficit in the CSS programming budget (with a complete annihilation of the PEI budget) while also expanding the BHSA target population to include those dealing with substance use disorders (a hallmark of SB 326).
Any and All Suggestions, Questions, Comments, Edits, and/or Clarifications Are Welcome - and can be sent directly to hugh@namiscc.org

Thank you.
Summary
This is a September 2023 Patients’ Rights Advocate Report from the Patients’ Rights Advocacy program. It includes the following: telephone calls, reports, and emails. It includes a breakdown of the number of certified clients, the number of hearings, and the number of contested hearings. It also includes a breakdown of Reise Hearing activity, including the number of Riese Hearings filed, the number of Riese conducted, and the number that were lost.

Patients’ Rights Advocate Report
September 2023

************************************************************************************

Telecare
Record 14070

9/8/2023 This writer received a phone call from a staff member of county Adult Protective services. He stated that he is concerned about a gentle by the name at the Telecare CSP According to the caller staff were planning to discharge the gentleman into an unsafe environment. This writer placed a call to the client but was not able to communicate with him. Another call was placed to the CSP staff informing them that the Patients’ Rights Advocate received a call of concern from APS. Nothing more can be done by the PRA at this time.

Record 14082

On September 6, 2023, my office received a complaint about a transfer to San Jose Behavioral health. On the morning of September 6, 2023. (Over the Labor Day Holiday). He believes that this transfer may have been retaliation. I encouraged him to contact my office when discharged and back in Santa Cruz County to sign a release of information. As of this date (10/02/23) he has not contacted my office.

Record 14084

This writer received a message from a client placed on a 5250 hold. He stated that he is being held as a prisoner. I concurred with the client that he has lost his right of liberty for a period and advised him of his right to contest the hold by filing a writ of habeas corpus. This writer
informed the client of the necessary steps to be taken. I also advised him to obtain as much information about why the staff believes he needs further treatment at the facility.

**Record 14085**

On September 14, 2023, this writer received a call from a gentleman placed on a voluntarily hold the PHF. The client requested support from Telecare staff to provide housing. The caller gave this writer permission to speak with his social worker. This writer spoke with the social worker who assured me that the team was working on the client’s behalf to provide placement and/or transportation.

**Record 14100**

On September 14, 2023, this writer received a phone call from a client at the Telecare psychiatric Facility. The client stated that certain Rehab staff were not treating the patients with respect. The client also reported difficulties with her roommate. This writer* received verbal permission to speak with the clinical director who agreed to meet with the client. The client was also provided with another room.

*Ms. Davi Schill

**Front Street Residential**

**Record 14099**

This writer* met with the client at the facility. The resident reported that staff were actively attempting to keep him from visiting with a family member. The family member is not permitted on campus and the resident is not permitted to see their family member. The resident was reminded that staff do have a responsibility to keep all residents safe, but the resident could visit with the family member off campus. The resident was agreeable to this stipulation.

Reise Hearings / Capacity Hearings

Total number of Riese petitions filed by the Telecare treating psychiatrist: 5
Total number of Riese Hearings conducted: 5
Total number of Riese Hearings lost: 5
Total number of Riese Hearings won: 0
Total number of Riese Hearings withdrawn: 0
Hours spent on cancelled Riese hearings: N/A
House spent on all Riese hearings: 3.5 hours
Riese appeal: 0

Hours spent on all Riese Hearings included those hearings that were cancelled by the hospital: 3.5 hours

AB2275 Hearings:

On September 7, 2023, an AB2275 hearing was held for a minor held under an LPS (second 5150). This writer interviewed and advised client of their rights. Advised parents of the PRA’s role in the hearing process. Mother attended the hearing. Calls made to county, Dominican social work, and parent to coordinate hearing. Total time: 2 hours.

Respectfully submitted,

Davi Schill, PRA

George N. Carvalho, PRA
MHAB Mission Statement:

To obtain the highest quality and most effective Behavioral Health services for the County.

MHAB Goals:

1) Advise the Behavioral Health Department on current and ongoing issues and potential solutions as they relate to the quality and effectiveness of Behavioral Health Services for the County

2) Develop skills, identify resources and utilize best practices to maximize the effectiveness of the Santa Cruz County Mental Health Advisory Board

3) Increase community awareness on issues, services and solutions related to Behavioral Health to ensure inclusion and dissemination of accurate and relevant information
The California Behavioral Health Planning Council (Council) is under federal and state mandate to advocate on behalf of adults with severe mental illness and children with severe emotional disturbance and their families. The Council is also statutorily required to advise the Legislature on behavioral health issues, policies, and priorities in California. The Council advocates for an accountable system of seamless, responsive services that are strength-based, consumer and family member driven, recovery oriented, culturally, and linguistically responsive and cost effective. Council recommendations promote cross-system collaboration to address the issues of access and effective treatment for the recovery, resilience, and wellness of Californians living with severe mental illness.

CBHPC 2023 Data Notebook: Introduction

What is the Data Notebook? Purpose and Goals

The Data Notebook is a structured format to review information and report on aspects of each county’s behavioral health services. A different part of the public behavioral health system is addressed each year, because the overall system is very large and complex. This system includes both mental health and substance use treatment services designed for individuals across the lifespan.

Local behavioral health boards/commissions are required to review performance outcomes data for their county and to report their findings to the California Behavioral Health Planning Council (Planning Council). To provide structure for the report and to make the reporting easier, each year a Data Notebook is created for local behavioral health boards to complete and submit to the Planning Council. Discussion questions seek input from local boards and their departments. These responses are analyzed by Planning Council staff to create annual reports to inform policy makers and the public.

The Data Notebook structure and questions are designed to meet important goals:
- To help local boards meet their legal mandates\(^1\) to review and comment on their county’s performance outcome data, and to communicate their findings to the Planning Council;
- To serve as an educational resource on behavioral health data;
- To obtain opinion and thoughts of local board members on specific topics;
- To identify unmet needs and make recommendations.

In 2019, we developed a section (Part I) with standard questions that are addressed each year to help us detect any trends in critical areas affecting our most vulnerable populations. These include foster youth, homeless individuals, and those with serious mental illness (SMI) who need housing in adult residential facilities (ARFs) and some other settings. These questions assist in the identification of unmet needs or gaps in services that may occur due to changes in population, resources, or public policy.

What’s New This Year?

The topic selected for the 2023 Data Notebook is stakeholder engagement. The Planning Council has long supported upholding the principles of the Mental Health Services Act (MHSA) and encourages consumer and family member participation in the

---

\(^1\) W.I.C. 5604.2, regarding mandated reporting roles of MH Boards and Commissions in California.
stakeholder process for behavioral health services through the Community Program Planning (CPP) process, as well as other stakeholder engagement activities.

**How the Data Notebook Project Helps You**

Understanding data empowers individuals and groups in their advocacy. The Planning Council encourages all members of local behavioral health boards/commissions to participate in developing the responses for the Data Notebook. This is an opportunity for local boards and their county behavioral health departments to work together to identify important issues in their community. This work informs county and state leadership about local behavioral health (BH) programs, needs, and services. Some local boards use their Data Notebook in their annual report to the County Board of Supervisors.

In addition, the Planning Council will provide our annual ‘Overview Report’, which is a compilation of information from all of the local behavioral health boards/commissions who completed their Data Notebooks. These reports feature prominently on the website² of the California Association of Local Mental Health Boards and Commissions. The Planning Council uses this information in their advocacy to the legislature, and to provide input to the state mental health block grant application to SAMHSA³.

**Example of Statewide Data for Specialty Mental Health and Access Rates**

Tables 1-A and 1-B on the next two pages shows typical data and demographics for California recipients of Specialty Mental Health Services (SMHS) for fiscal year (FY) 2021-2022. These are the most recent data available at the time this document was prepared. SMHS are intended for adults with serious mental illness (SMI) and for children with serious emotional disorders (SED). The category of ‘certified eligibles’ means those persons (also called beneficiaries) who are eligible and approved to receive Medi-Cal benefits for health care.

These metrics are from datasets developed in accordance with California Welfare and Institutions code § 14707.7 (added as part of Assembly Bill 470 on 10/7/17). Due to recent changes in how AB 470 data is presented by DHCS in the Behavioral Health Demographic Dashboard⁴, demographic metrics presented are not exact, as the dashboard rounds them to the nearest .1 thousand (k) or million (M).

Notes: The first column presents the demographic groups of interest. Next there are three columns. The first column of numbers shows the number of clients who received one or more services, described as Specialty Mental Health Visits. The second column of numbers is labeled ‘Certified Eligibles’, which is the number of clients who were deemed eligible and approved to received health care paid by Medi-Cal. The third column of numbers represents the service penetration rates. These penetration rates are taken as one measure of Access. They are calculated by dividing the total number

\textsuperscript{5} In contrast, non-specialty Mental Health Services (i.e., Managed Care (MC), Fee-for-Service (FFS), etc), services generally designed for people with mild-to-moderate mental health needs.
of Clients with MH visits by the total number of Medi-Cal Eligibles, multiply by 100 to express the result as a percentage; this is taken as the “Access Rate.”

**Table 1-B. California Adults and Older Adults, Access Rates for Specialty Mental Health Services, Fiscal Year 2021-22.**

</tbody>
</table>

**Notes:** The data for Adults and Older Adults were calculated similarly to the data for Children and Youth in Figure 1-A. For example, out of all Adult 9.5M Medi-Cal eligibles, a total of 341.5k individuals, i.e. 3.6% received Specialty Mental Health Services (SMHS).

---

6 For comparison, the population of the state of California was 39,029,342 on April 1, 2020, according to the U.S. Census Bureau. [https://www.census.gov/quickfacts/CA](https://www.census.gov/quickfacts/CA). Of those residents, 24.3% of Californians were adults (age 21 and above) receiving Medi-Cal benefits. Also, 14.9% of Californians were children or youth < 20 who received Medi-Cal benefits. These numbers show that 39.2% of all Californians of all age groups received Medi-Cal in FY 2021-22.
CBHPC 2023 Data Notebook – Part I:
Standard Yearly Data and Questions for Counties and Local Boards

In recent years, changes in data availability permit local boards and other stakeholders to consult some Medi-Cal data online that is provided by the Department of Health Care Services (DHCS). These data include populations that receive Specialty Mental Health Services (SMHS) and Substance Use Disorder (SUD) treatment. Standard data are analyzed each year to evaluate the quality of county programs and those reports can be found at www.CalEQRO.com. Additionally, Mental Health Services Act (MHSA) data are found in the ‘MHSA Transparency Tool’ presented on the Mental Health Services Oversight and Accountability Commission (MHSOAC) website.7

The Planning Council would like to examine some county-level data that are not readily available online and for which there is no other public source. Please answer these questions using information for fiscal year (FY) 2021-2022 or the most recent fiscal year for which you have data. Not all counties will have readily available data for some of the questions asked below. In that case, please enter N/A for ‘data not available.’ We acknowledge and appreciate the necessary time and effort provided by local boards and their behavioral health departments to collect and discuss these data.

**Adult Residential Care**

There is little public data available about who is residing in licensed facilities listed on the website of the Community Care Licensing Division8 at the CA Department of Social Services. This lack of data makes it difficult to know how many of the licensed Adult Residential Facilities (ARFs) operate with services to meet the needs of adults with chronic and/or serious mental illness (SMI), compared to other adults who have physical or developmental disabilities. In 2020, legislation was signed that requires collection of data from licensed operators about how many residents have SMI and whether these facilities have services to support client recovery or transition to other housing. The response rate from facility operators does not provide an accurate picture for our work.

The Planning Council wants to understand what types of data are currently available at the county level regarding ARFs and Institutions for Mental Diseases (IMDs)9 available to serve individuals with SMI, and how many of these individuals (for whom the county has financial responsibility) are served in facilities such as ARFs or IMDs. ‘Bed day’ is

---

8 Link to Licensed Care directory at California Department of Social Services. [https://www.ccll.dss.ca.gov/carefacilitysearch/](https://www.ccll.dss.ca.gov/carefacilitysearch/)
9 Institution for Mental Diseases (IMD) List: [https://www.dhcs.ca.gov/services/MH/Pages/IMD-List.aspx](https://www.dhcs.ca.gov/services/MH/Pages/IMD-List.aspx)
defined as an occupancy or treatment slot for one person for one day. One major
difference is that IMDs offer mental health treatment services in a psychiatric hospital or
certain types of skilled nursing home facilities. In contrast, a non-psychiatric facility such
as an ARF is a residential facility that may provide social support services like case
management but not psychiatric treatment.

The following is a text summary of the survey questions for Part I of the 2022 Data
Notebook. Please note that the questions are presented here in a different format than
the finalized SurveyMonkey online survey. Refer to the PDF preview of the
SurveyMonkey survey to see a more accurate presentation of the items.

Questions:

1) Please identify your County / Local Board or Commission.

2) For how many individuals did your county behavioral health department
pay some or all of the costs to reside in a licensed Adult Residential Care
Facility (ARF), during the last fiscal year? (Text response)

3) What is the total number of ARF bed-days paid for these individuals, during
the last fiscal year? (Text response)

4) Unmet needs: how many individuals served by your county behavioral
health department need this type of housing but currently are not living in
an ARF? (Text response)

5) Does your county have any ‘Institutions for Mental Disease’ (IMD)?
a. No
b. Yes. If Yes, how many IMDs? (Text response)

6) For how many individual clients did your county behavioral health
department pay the costs for an IMD stay (either in or out of your county),
during the last fiscal year?
   In-county: (Text response)   Out-of-county: (Text response)

7) What is the total number of IMD bed-days paid for these individuals by your
county behavioral health department during the same time period?
(Text response)
Homelessness: Programs and Services in California Counties

The Planning Council has a long history of advocacy for individuals with SMI who are homeless, or who are at-risk of becoming homeless. California’s recent natural disasters and public health emergency have exacerbated the affordable housing crisis and homelessness. Federal funding was provided to states that could be used for temporary housing for individuals living on the streets as a method to stop the spread of the COVID-19 virus. Additional policy changes were made to mitigate the rate of evictions for persons who became unemployed as a result of the public health crisis.

Studies indicate that only one in three individuals who are homeless also have serious mental illness and/or a substance use disorder. The Planning Council does not endorse the idea that homelessness is caused by mental illness, nor that the public BH system is responsible to fix homelessness, financially or otherwise. However, we do know that recovery happens best when an individual has a safe, stable place to live.

The issue of homelessness is very complex and involves multiple systems and layers of interaction. Therefore, the Council will continue to track and report on the programs and supports offered by counties to assist homeless individuals who have SMI and/or SUD. Causes and contributory factors are complex, and thus our solutions will need to address numerous multidimensional and multi-systemic challenges.

Every year, the states, counties, and many cities perform a “Point-in-Time” count of the homeless individuals in their counties, usually on a specific date in January. Such data are key to state and federal policy and funding decisions. The pandemic disrupted both the methods and the regular schedule for the count in 2021, during which there was no data collected for California’s unsheltered population due to Covid-19 protocols. Those preliminary data were taken down subsequently for further review before re-posting. Therefore, the “percent increase” column for this table compares the 2022 totals with the totals for 2020, for which there was complete data.

\textsuperscript{11} PIT Count = yearly January Point-in-Time Count of Homeless Individuals, conducted according to the guidance of the U.S. Department of Housing and Urban Development (www.HUD.gov). Sheltered persons include those who were in homeless shelters and various types of transitional or emergency housing.
Questions, continued:

8) During fiscal year 2021-2022, what new programs were implemented, or existing programs were expanded, in your county to serve persons who are both homeless and have severe mental illness? (Mark all that apply.)
   a. Emergency Shelter
   b. Temporary Housing
   c. Transitional Housing
   d. Housing/Motel Vouchers
   e. Supportive Housing
   f. Safe Parking Lots
   g. Rapid Re-Housing
   h. Adult Residential Care Patch/Subsidy
   i. Other (Please specify)

Child Welfare Services: Foster Children in Certain Types of Congregate Care

In California, about 60,000 children under the age of 18 are in foster care. They were removed from their homes because county child welfare departments, in conjunction with juvenile dependency courts, determined that these children could not live safely with their caregiver(s). Most children are placed with a family who receive foster children, but a small number of the children need a higher level of care and are placed in a setting with more sophisticated services.

California is striving to move away from facilities formerly known as long-term group homes, and prefers to place all youth in family settings, if possible. Regulations have revised the treatment facilities for children whose needs cannot be met safely in a family setting. The new facility type is called a Short-Term Residential Treatment Program (STRTP). STRTPs are designed to provide short-term placement that includes intensive behavioral health services.

All of California’s counties are working toward closing long-term group homes and are establishing licensed STRTPs. This transition will take time and it is important for your board to talk with your county director about what is happening in your county for children in foster care who are not yet able to be placed in a family setting, or who are in a family setting and experience a crisis that requires short-term intensive treatment.
Some counties do not yet have STRTPs and may place children/youth in another county or even out-of-state. Recent legislation (AB 1299) directs that the Medi-Cal eligibility of the child be transferred to the receiving county. This means, the county receiving the child now becomes financially responsible for his/her Medi-Cal costs.

**Examples of the foster care CDSS data for Q4, 2020, in CA:**
- Total foster youth and children: 53,180
- Total placed in an STRTP: 2,444 (or 4.6% of foster youth)
- Total STRTP placed out-of-county: 1174 (or 2.2% of foster youth)
- Total STRTP placed out-of-state: 66 (or 0.12 % of foster youth)

Questions (continued):

9) Do you think your county is doing enough to serve the foster children and youth in group care?
   a. Yes
   b. No. If No, what is your recommendation? Please list or describe briefly. (*Text response*)

10) Has your county received any children needing “group home” level of care from another county?
    a. No
    b. Yes. If Yes, how many? (*Text response*)

11) Has your county placed any children needing “group home” level of care into another county?
    a. No
    b. Yes. If Yes, how many? (*Text response*)
Stakeholder Engagement in the Public Mental Health System

Context and Background

The topic selected for the 2023 Data Notebook is “stakeholder engagement.” Stakeholder engagement refers to the active involvement of individuals or groups with a vested interest in the mental health system. These stakeholders include consumers of mental health services, their families, mental health professionals, government agencies, community organizations, advocacy groups, and policymakers. Engaging these stakeholders fosters a participatory approach, giving voice to diverse perspectives and enabling collective decision-making. Stakeholder engagement is integral to the implementation of the Mental Health Services Act (MHSA) in California. By involving a wide range of voices, the MHSA can develop and deliver programs and services that are responsive to community needs, ultimately improving mental health outcomes and well-being in California.

Stakeholder engagement offers numerous benefits in the context of mental health. Firstly, it enhances service delivery by allowing the mental health system to address the specific needs and preferences of individuals with mental health conditions. Through collaborative decision-making, services can be designed to be more accessible, culturally sensitive, and person-centered, ultimately leading to improved outcomes for those seeking support.

Secondly, stakeholder engagement empowers the community by providing opportunities for active participation and involvement in the development of mental health policies and programs. By valuing the perspectives of diverse stakeholders, the system becomes more responsive to the concerns, priorities, and aspirations of the community it serves. This active involvement fosters a sense of ownership and empowerment among community members, enabling them to contribute to shaping the mental health services available to them.

Thirdly, it plays a crucial role in ensuring accountability within the mental health system. By involving stakeholders, a system of checks and balances is created, promoting transparency and holding the system accountable for its actions and outcomes. This involvement helps to guarantee that resources are allocated effectively and efficiently, maximizing their impact and addressing any potential issues or discrepancies that may arise.

Overall, stakeholder engagement in mental health has far-reaching benefits. It leads to improved service delivery that is tailored to individual needs, empowers the community
by involving them in decision-making processes, and ensures accountability and transparency within the mental health system. By actively engaging stakeholders, mental health organizations can create a more inclusive and effective system that ultimately improves the well-being of individuals experiencing mental health conditions.

**Challenges and Barriers**

The effective engagement of stakeholders in the California public mental health system faces several barriers and challenges. One of the primary challenges is ensuring diverse representation among stakeholders. Overcoming language barriers, cultural differences, and limited outreach resources is crucial to capture a wide range of perspectives. Inadequate funding and staffing also pose significant challenges, hindering the capacity to hold regular meetings, conduct outreach efforts, and provide necessary support to stakeholders.

Some other potential barriers include:

- Stigma and discrimination surrounding mental health create additional obstacles to stakeholder engagement. Addressing stigma requires targeted educational campaigns, anti-stigma initiatives, and the creation of safe spaces that foster open dialogue and inclusivity.
- Power imbalances among stakeholders can also impede effective engagement. Achieving equitable representation and providing mechanisms to address power differentials are essential to foster an inclusive and democratic stakeholder engagement process.
- The complexity and fragmentation of the California public mental health system further present challenges. Effective communication strategies, standardized protocols, and clear channels of collaboration are necessary to engage stakeholders from different sectors and align their efforts.
- Limited accessibility poses another barrier to meaningful stakeholder engagement. Proactive measures such as providing accommodations, utilizing virtual platforms for remote participation, and ensuring inclusive physical spaces are essential to address accessibility barriers.
- Stakeholder engagement processes can be time-consuming and may lead to engagement fatigue over time. Balancing the need for sustained engagement with stakeholders' limited time and competing priorities requires clear goals, efficient processes, and recognition of stakeholders' contributions to maintain their interest and involvement.
Overcoming these barriers and challenges necessitates a comprehensive approach. By addressing these challenges, the California public mental health system can cultivate inclusive, responsive, and impactful mental health policies and programs.

**Key Stakeholders**

In the public mental health system, various stakeholders play vital roles in shaping policies, programs, and services. The California Code of Regulations provides the following definition of “stakeholders” within the public mental health system:

**Cal. Code Regs. Tit. 9, § 3200.270 - Stakeholders**

"Stakeholders" means individuals or entities with an interest in mental health services in the State of California, including but not limited to: individuals with serious mental illness and/or serious emotional disturbance and/or their families; providers of mental health and/or related services such as physical health care and/or social services; educators and/or representatives of education; representatives of law enforcement; and any other organization that represents the interests of individuals with serious mental illness/ and/or serious emotional disturbance and/or their families.

Additionally, California Welfare and Institutions Code provides a list of stakeholders for the Community Program Planning (CPP) Process:

**California Code, Welfare and Institutions Code - WIC § 5848 (a)**

Each three-year program and expenditure plan and update shall be developed with local stakeholders, including adults and seniors with severe mental illness, families of children, adults, and seniors with severe mental illness, providers of services, law enforcement agencies, education, social services agencies, veterans, representatives from veterans' organizations, providers of alcohol and drug services, health care organizations, and other important interests. Counties shall demonstrate a partnership with constituents and stakeholders throughout the process that includes meaningful stakeholder involvement on mental health policy, program planning, and implementation, monitoring, quality improvement, evaluation, and budget allocations.

Using these sources, we can identify key stakeholder groups for engagement. Here is a more detailed list of these key stakeholders:

**Adults and Seniors with severe mental illness (SMI):** This group represents individuals who are directly impacted by mental health conditions. Their perspectives and experiences are essential in understanding the unique challenges they face and in
developing services that meet their specific needs. Engaging adults and seniors with SMI ensures their voices are heard and helps tailor interventions to improve their overall well-being and recovery.

**Families of children, adults, and seniors with SMI:** Family members are crucial stakeholders as they provide support, care, and advocacy for their loved ones with mental illness. Their insights offer a valuable perspective on the challenges faced by individuals with SMI and the impact on the family unit. Involving families in decision-making processes helps ensure that services are holistic, family-centered, and responsive to the needs of both the individual and their support network.

**Providers of Mental Health and/or Related Services:** Mental health professionals, including psychiatrists, psychologists, counselors, and social workers, are instrumental in delivering quality care and support. Their expertise and frontline experience provide valuable input on service gaps, best practices, and areas for improvement within the mental health system. Engaging with mental health providers ensures that policies and programs are evidence-based, align with professional standards, and promote quality outcomes.

**Law Enforcement Agencies:** Law enforcement agencies often come into contact with individuals experiencing mental health crises. Their involvement in stakeholder engagement facilitates collaboration between mental health services and law enforcement, aiming to improve crisis intervention and diversion programs. This partnership can enhance community safety, reduce unnecessary arrests and incarcerations, and facilitate appropriate referrals to mental health services.

**Educators and/or Representatives of Education:** Educators play a significant role in identifying and supporting students with mental health needs. Their involvement as stakeholders contributes to the development of early intervention strategies, mental health promotion programs, and the implementation of appropriate supports within educational settings. Collaborating with educators helps create a nurturing environment that supports the academic, social, and emotional well-being of students.

**Social Services Agencies:** Social services agencies, such as those involved in housing, employment, and welfare, intersect with the mental health system. Their participation in stakeholder engagement ensures coordination and integration of services, addressing the complex needs of individuals with mental health conditions holistically. Collaboration with social services agencies supports efforts to provide stable housing, employment opportunities, and social support networks to promote recovery and community integration.

**Veterans:** Veterans, particularly those who have served in combat or experienced traumatic events, often face mental health challenges such as post-traumatic stress
disorder (PTSD) and depression. Engaging veterans as stakeholders enables the mental health system to address their unique needs and develop specialized programs tailored to their experiences. This collaboration ensures that mental health services for veterans are comprehensive, accessible, and culturally sensitive.

**Representatives from Veterans Organizations:** Representatives from veterans’ organizations, such as advocacy groups or support networks, provide a platform for veterans’ voices and perspectives to be heard. Their involvement in stakeholder engagement fosters collaboration and helps shape policies, programs, and services that meet the specific needs of veterans.

**Providers of Alcohol and Drug Services:** Substance use disorders frequently co-occur with mental health conditions, requiring integrated care approaches. Engaging providers of alcohol and drug services as stakeholders promotes collaboration between mental health and addiction treatment providers. This collaboration ensures a comprehensive approach to addressing the complex needs of individuals with co-occurring disorders, facilitating recovery and reducing barriers to treatment.

**Health Care Organizations:** Health care organizations, including hospitals, clinics, and primary care providers, are essential stakeholders in the mental health system. Collaboration with these organizations helps integrate mental health care into primary care settings, reduce stigma, and improve access to services. Involving health care organizations enhances the coordination of care and strengthens the overall continuum of mental health support.

**Other important Interests:** The mental health system involves numerous other stakeholders, such as policymakers, researchers, community leaders, advocacy groups, and philanthropic organizations. Each brings unique perspectives, expertise, and resources to the table. Their involvement in stakeholder engagement ensures that policies and programs are informed by evidence, responsive to community needs, and adequately resourced.

By engaging and involving these diverse stakeholders, the public mental health system can benefit from a comprehensive range of insights, expertise, and perspectives. This collaborative approach leads to more effective, inclusive, and person-centered mental health services that better serve the needs of individuals, families, and communities.

**Best Practices for Stakeholder Engagement**

There are many resources available regarding promising and best practices for stakeholder engagement. Some commonly identified guiding principles and best practices are:
1. **Inclusive Approach**: Ensure that the stakeholder engagement process is inclusive and representative of diverse perspectives. Include individuals with lived experience, family members, behavioral health service providers, advocacy groups, community organizations, and policymakers. Embrace diversity and strive for equity in representation.

2. **Early and Ongoing Engagement**: Engage stakeholders early in the decision-making process and maintain ongoing communication throughout the planning, implementation, and evaluation stages. Provide opportunities for input, collaboration, and feedback at various stages to ensure meaningful participation.

3. **Purposeful Communication**: Foster open and transparent communication with stakeholders. Provide clear information about goals, processes, and timelines. Use plain language and avoid jargon to ensure that all stakeholders can easily understand and contribute to the conversation. Likewise, practice active listening when stakeholders are speaking. Rather than assuming what they mean, ask follow-up questions to ensure that their input is understood.

4. **Collaboration and Co-creation**: Foster a collaborative environment that encourages stakeholders to actively participate in decision-making. Co-create solutions by involving stakeholders in the design and implementation of programs, policies, and services. Value their expertise and insights.

5. **Training and Education**: Provide stakeholders with relevant training and education to enhance their understanding of behavioral health issues, policies, and practices. Equip them with the knowledge necessary to contribute effectively and make informed decisions.

6. **Flexibility and Adaptability**: Recognize that stakeholders may have different levels of expertise, resources, and availability. Provide flexibility in engagement methods to accommodate diverse needs, such as offering virtual options, providing written materials, and conducting surveys or focus groups.

7. **Data-Informed Decision Making**: Use data and evidence to inform discussions and decision-making processes. Share relevant data with stakeholders to foster informed dialogue and facilitate collaborative problem-solving.

8. **Empowerment and Shared Leadership**: Empower stakeholders to actively contribute and take ownership of the process. Promote shared leadership by involving stakeholders in the development of agendas, facilitating meetings, and encouraging their participation in decision-making.

9. **Recognition and Appreciation**: Recognize and appreciate the contributions of stakeholders. Acknowledge their time, effort, and expertise. Provide opportunities for public recognition, such as featuring success stories or highlighting stakeholder involvement in reports and presentations.
10. **Evaluation and Continuous Improvement**: Regularly evaluate the effectiveness of stakeholder engagement efforts and seek feedback from participants. Use this feedback to refine engagement strategies and improve future processes.

These are just some of the many suggested best practices and guiding principles for quality stakeholder engagement. By incorporating these and other best practices, behavioral health systems can effectively engage stakeholders, leverage their expertise, and create more responsive, person-centered, and equitable services and policies.

**MHSA Community Program Planning Process**

One of the major ways that the MHSA includes stakeholder engagement is the MHSA Community Program Planning (CPP) Process. This state-mandated participatory process is a collaborative approach used in California to develop and refine mental health programs funded by the MHSA. Counties use the CPP process in the development of Three-Year Program and Expenditure Plans and updates. Counties work alongside stakeholders to analyze current community mental health needs, issues resulting from any lack of community services, and current system capacity, as well as evaluate priorities and strategies to meet the needs of the community.

California Codes and Regulations dictate that the MHSA CPP process should be:
- Based in community collaboration (CCR, 9 CA §3320 and 3200.060).
- Culturally competent (CCR, 9 CA §3320 and 3200.100).
- Client and family driven (CCR, 9 CA §3320, 3200.050 and 3200.120).
- Wellness, recovery and resilience-focused (CA WIC § 5813.5(d)).
- Focused on providing an integrated service experience for clients and their families (CCR, 9 CA §3320 and 3200.190).

MHSA CPP Processes must include the following regarding stakeholder participants:
- **Stakeholders** (as previously defined/discussed based on WIC, § 5848a).
- **Underserved populations**. Representatives from unserved and/or underserved populations and family members of unserved/underserved populations (CCR, 9 CA § 3300).
- **Diversity**. Participants that “reflect the diversity of the demographics of the County, including but not limited to, geographic location, age, gender, and race/ethnicity” (CCR, 9 CA § 3300).

Additionally, the CPP process should, at a minimum include the following things:
- Staffing for positions and/or units to facilitate the CPP process.
• Training for stakeholders and county staff.
• Outreach to consumers with SMI and their family members to ensure the opportunity to participate.
• A local review process that includes a 30-day public comment period prior to submitting the Three-Year Program and Expenditure Plans or Annual Updates.

The MHSA currently allows counties to use up to 5% of their total Community Services and Support (CSS) funds to facilitate a robust planning process. This includes using funding to accommodate stakeholder participation in the CPP process. All counties are required to use the CPP process and document the Three-Year Program and Expenditure Plans and Annual Updates. This includes descriptions of the methods used to collect stakeholder input, documentation that a public hearing was held, summary and analysis and a description of changes made based on community input.

The local MH/BH boards and commissions have the following responsibilities in this process:
• Review and approve the procedures used to ensure stakeholder involvement in all stages of the planning process.
• Review the adopted plan or update and make recommendations.
• Conduct MHSA public hearings at the close of the 30-day public comment periods.

Overall, the MHSA Community Program Planning Process fosters a participatory and community-driven approach to mental health program development. By engaging stakeholders and leveraging their expertise and insights, the CPP Process aims to create programs that are responsive, culturally sensitive, and tailored to the unique needs of the community. This collaborative effort ultimately leads to the implementation of effective and impactful mental health services in California communities.

While the MHSA CPP process is an important (and legally required) example of stakeholder engagement, the principles and practices of stakeholder engagement can be applied to many different programs and processes. This includes but is not limited to mental/behavioral health board/commission meetings, EQRO focus groups, and SAMHSA funded programs.
Resources

The following resources all pertain to stakeholder engagement in mental health, including the CPP process. We encourage counties to utilize these resources to learn more about responsive and effective engagement practices.

- CALBHBC: MHSA CPP One-Pager
- CALBHBC: Community Engagement PowerPoint
- MHSOAC: CPP Processes - Report of Other Public Community Planning Processes
- MHSOAC: Promising CPP Practices
- SAMHSA: Community Engagement – An Essential Component of an Effective and Equitable Substance Use Prevention Program

Part II: Data Notebook Questions

Please respond by means of the Survey Monkey link provided with this Data Notebook.

12. For each of the following categories, please choose the option from the dropdown menu that best describes how often your county organizes stakeholder engagement meetings or events.
   - Dropdown menu options:
     - Less than once a year
     - Annually (once a year)
     - Every 6 months
     - Quarterly (four times a year)
     - Monthly
     - More than once a month
   - Categories:
     - MHSA Community Planning Process (CPP)
     - MHSA 3-year plan updates
     - EQRO focus groups
     - SAMHSA-funded programs
     - Mental/Behavioral Health Board/Commission Meetings
     - County Behavioral Health co-sponsoring/partnering with other departments or agencies
     - Other (please specify):

13. Estimate the number of people who participated in your stakeholder processes in fiscal year 2021/2022. (Numerical response)
14. Approximately what percentage of stakeholder engagement events or efforts in your county were in-person only, virtual only, a combination of both in-person and virtual, or written communications (please answer with a whole number for each, such that the total of the four amounts to 100)
   - In-person only:
   - Virtual only:
   - Combination of both in-person and virtual:
   - Written communications (such as online surveys or email questionnaires):

15. Which of the following languages did your county use to conduct stakeholder meetings or outreach during fiscal year 2021/2022, with or without the use of interpreters? (Check all that apply)
   - Arabic
   - Armenian
   - Cambodian
   - Chinese
   - English
   - Farsi
   - Hindi
   - Hmong
   - Japanese
   - Korean
   - Laotian
   - Mien
   - Punjabi
   - Russian
   - Spanish
   - Tagalog
   - Thai
   - American Sign Language (ASL)
   - Other languages (please specify)

This list of languages reflects the threshold and concentration languages for all counties as of July 2021 from the following DHCS document: Threshold and Concentration Languages (ca.gov)

16. Which of the following stakeholder groups have you collected and implemented input from within the last year? (Check all that apply)
   - Adults with severe mental illness (SMI)
   - Older adults / Seniors with SMI
   - Families of children, adults and seniors with SMI
   - Individuals with developmental disabilities and/or their representatives
   - Providers of mental health and/or related services
   - Representatives of managed care plans
   - Law enforcement agencies
• Educators and/or representatives of education
• Social services agencies
• Veterans
• Representative from veterans’ organizations
• Providers of alcohol and drug services
• Health care organizations
• Hearing impaired individuals
• LGBTQ+ individuals
• Youth
• Other important interests (please specify)
• Specific racial/Ethnic groups (please specify)

17. Please describe how stakeholder input is communicated to the behavioral health director, the mental/behavioral health board/commission, and any other agencies or groups for informing policy. (Text response)

18. Please describe how your county implements collected stakeholder input to actively inform policy and programs. Include how the county decides what ideas to implement or actions to take. (Text response)

19. Does your county have a Community Program Planning (CPP) plan in place?
   • Yes (If yes, describe how you directly involve stakeholders in the development and implementation of this plan)
   • No

20. Is your county supporting the CPP process in any of the following ways? (Please select all that apply)
   a) Reimbursement of travel costs for stakeholders participating in in-person meetings or events.
   b) Providing refreshments or food for stakeholder participants
   c) Dedicated staff assistance to facilitate stakeholder meetings and events.
   d) Providing information and training for stakeholders on MHSA programs, regulations, and procedures.
   e) Holding meetings in physically/geographically accessible locations around the county.
   f) Utilizing language interpreting services.
   g) Holding meetings at times convenient to community stakeholders’ schedules.
   h) Providing technical assistance for stakeholders participating in webinars or teleconferences.
   i) Other (please specify)
   j) None of the above
21. Does your county provide training for staff on cultural awareness, community outreach, and stakeholder engagement? If yes, how? If no, why not?
   • Yes (with comment)
   • No (with comment)

22. Which of the following barriers does your county face regarding achieving meaningful and impactful engagement of stakeholders (specifically, mental health consumers and family members)? (Check all that apply)
   a. General difficulty with reaching stakeholders.
   b. Difficulty conducting community outreach to racial/ethnic communities or other specific communities of interest.
   c. Difficulty reaching stakeholders with disabilities.
   d. Lack of funding or resources for stakeholder engagement efforts.
   e. Shortage of properly trained staff to support and facilitate stakeholder engagement.
   f. Difficulty adapting to virtual meetings/communications.
   g. Difficulty providing accommodations to stakeholders.
   h. Difficulty incorporating stakeholder input in the early stages of programming.
   i. Lack of “buy-in” from decision makers when it comes to implementing stakeholder input.
   j. Other (please specify)

23. Are your behavioral health board/commission members involved in your county’s stakeholder engagement and/or CPP processes? If yes, describe how.
   a. Yes (with text comment)
   b. No

Note: California WIC 5892 allocates Mental Health Services Funds for county mental health programs to pay for the expenses of mental health board members to perform their duties, and to pay for the costs of consumers, family members, and other stakeholders to participate in the planning process. This includes 5% of total CSS funds to support a robust CPP process with community stakeholders.

24. Has the COVID-19 pandemic increased or decreased the level of stakeholder engagement and input in your county?
   a. Increased
   b. Decreased
   c. No change

25. Is there a fear or perception in your county that spending time, money, or other resources on stakeholder engagement conflicts with the need to provide direct services? (Yes/No)
26. What is one change or improvement regarding stakeholder engagement that your county would like to make within the next fiscal year? (Written response)

27. Do you have any other thoughts or comments regarding stakeholder engagement in your county or statewide? (Written response)

Post-Survey Questionnaire

Completion of your Data Notebook helps fulfill the board's requirements for reporting to the California Behavioral Health Planning Council. Questions below ask about operations of mental health boards, and behavioral health boards or commissions, etc.

28. What process was used to complete this Data Notebook? (Please select all that apply)
   a. MH board reviewed WIC 5604.2 regarding the reporting roles of mental health boards and commissions.
   b. MH board completed majority of the Data Notebook.
   c. Data Notebook placed on agenda and discussed at board meeting.
   d. MH board work group or temporary ad hoc committee worked on it.
   e. MH board partnered with county staff or director.
   f. MH board submitted a copy of the Data Notebook to the County Board of Supervisors or other designated body as part of their reporting function.
   g. Other (please specify)

29. Does your board have designated staff to support your activities?
   a. Yes (if yes, please provide their job classification)
   b. No

30. Please provide contact information for this staff member or board liaison.

31. Please provide contact information for your board’s presiding officer (chair, etc.)

32. Do you have any feedback or recommendations to improve the Data Notebook for next year?
