Relative Number of Confirmed COVID-19 Cases in California Counties

The chart shows the relative number of confirmed COVID-19 cases in California counties. The x-axis represents the days since the number of cases passed 0.03% of the county population (30 cases per 100,000), and the y-axis represents the number of cases per 100,000. The counties are represented by different markers, allowing for easy comparison of case trends across various regions.

Counties with a population lower than 50,000 are not shown. The data source is Johns Hopkins, last updated on 2020-09-15.
